KEYMACRO is a simple and straightforward internet monitoring app for Mac users that features three distinct features: 1. Real-time connection analysis 2. Ping test 3. MacOSX System Report. Website: Description: The KEYMACRO app will give you real-time information about your internet connection. All you need to do is plug your computer into the internet using a USB ethernet adapter. KEYMACRO will monitor your connection to the internet and continuously collect data which are then displayed in real-time. From there you can also perform custom ping tests to your favorite website, check the uptime of those websites and much more. All in real-time. Installation: Download the.pkg file to your desktop and drag the file into the Applications folder. This will allow you to run the app without having to install it on your computer. Use: The app does not require you to register, however you can register for a free 7 day trial. Platform: MacOSX License: Freeware Price: Free SuperPingDescription: Sometimes you just need to check what sites are up, sometimes you want to do a blind test, but maybe you just want to check what the speed of a server is without actually sending a ping request. SuperPing is a very handy utility for all of these tasks, plus a few more. When you launch the app, it automatically checks the status of the sites you select, like Google, Facebook, YouTube, 4shared, etc. If any of those sites go down, you will be notified about it in the app. SuperPing even lets you test the speed of selected sites by sending a ping request. You can also choose how often SuperPing checks the status of your selected sites and how long it can keep checking. SuperPing is a simple utility, which is intended to be both simple and useful, however there are many advanced features you can enable. For example, you can choose to keep an hourly log for the sites you have selected, so that you can see where and when they were down and up. If you happen to be a power user, you can enable a local log file and choose which drive to save the logs to. You can also choose to receive email updates if the sites you are testing go down or are slow. Features: Customizable ping requests Online tests Charts Logs Advanced options Requirements: Mac OS X 10.6 or higher Update: As 2edc1e01e8

Please try again. Latest Version Fixed an issue in which the app would show the drop-down menu not appearing. This app is not compatible with Windows 10. If you are using Windows 10 and you were running this version on Windows 7 or Windows 8, you may need to uninstall the program from your PC and reinstall it again. Net Uptime Monitor is a useful utility designed to help you measure and analyze the reliability of your connection. It can record the uptime status of the Internet connection and give you a comprehensive log of all the recorded failures. The program can also do a standard ping test and show you the results. Detailed information about the Internet connection's stability can be viewed and analyzed in the convenient log. You can analyze this log using the various filters that are provided and you can even print the results. It is also possible to set up an alert for any failure and see the logs associated with that alert. You can choose to run the ping tests at a specified time interval and specify the name and IP address of the target servers that are used. When the Internet is working well, the connection remains green. When there are failures, the connection is reported in yellow. Red represents a problem with the connection. What's New in the?

Wondering why the Internet connection is so slow? This app can help you determine if the connection is generally stable or if your ISP is experiencing some problems. When the connection fails, you can track down the culprits and fix the problem yourself. This app will test your Internet connection every 5 seconds. General features: - Check the Internet connection reliability: ping Google, Level 3 and OpenDNS servers and test how much time it takes for each to respond. You can specify target names and IP addresses. - Display the Internet reliability results: learn the results in real-time by looking at the light and the color of the indicator (green = good connection; yellow = connection lags; red = connection has failed). - View the Internet reliability log: the app can record the Internet reliability information and automatically store it to a text log file. - Display the errors: if the Internet connection has failed for too long, the app will automatically notify you so you can investigate and fix the problem. You can also specify the duration of the downtime before you receive the notification. - Change the Internet reliability alert: you can specify the notification settings. Bulletproof is a very easy to use app that helps you to protect your device from system issues. The app lets you make copies of your important files and folders before they are deleted by the system. You can also wipe the data if the system crashes or becomes unusable. This is one of the best apps for android that lets you protect your phone from system issues. bulletproof / Bulletproof by Invisible Hacks: Bulletproof is a very easy to use app that helps you to protect your device from system issues. The app lets you make copies of your important files and folders before they are deleted by the system. You can also wipe the data if the system crashes or becomes unusable. This is one of the best apps for android that lets you protect your phone from system issues. FEATURES: Backup and secure your files from system issues such as formatting, deleting or accidental deletion. It also supports backup and secure your images and videos. Backup and secure your data from system issues such as formatting, deleting or accidental deletion. It also supports backup and secure your images and videos. All the backups are safely stored in your SD card so you don't have to worry about accidentally losing any files. Bump your backup without any issues. It can restore all your data in the same way. All the backups are safely stored in your SD card so you don't have to worry about accidentally losing any files. Bump your backup without any issues.

□ It can restore all your

* Windows 10, Windows 7, Windows 8, or Windows 8.1 * .NET Framework 4.5, or an earlier version * Internet connection * English (US) New Features in 2.3.1 (2017-11-22): * Improved: Pregenerated Excel spreadsheet - you can now create an Excel spreadsheet and pre-generate several macros in just a few clicks. * Fixed: User Error - address bar errors are fixed. * Fixed: SQL command - SQL commands can be executed from SQL Server Management Studio and in custom
