I have used Lightroom 4 as well as the CC UI of Elements 11. The Elements CC download was faster and easier to install, it was also more stable and I didn't have any problems with the import of my images. Largely I didn't like the CC UI because it felt more like a watercolor type of aesthetics. Now that I have used Lightroom 5.2 as my primary Lightroom product, I love it. It's a more powerful version of Lightroom 4 with additional features. I the organization of my library, now all my photos are sorted by catalog, and sub catalogs, and I can also easily edit the meta data of my photos. I'm currently going to use this version of Lightroom 5.2 until the next version of Lightroom comes out. As you mentioned, the continuing keyboard shortcuts are very helpful for my workflow. One other thing about Elements CC that is helpful is that you can customize the look to match your workflow, I have done that by changing the colors like the datastage book covers in the catalog view. For now I am using Adobe Bridge for my import, now that I use Lightroom 5.2, I can't use Adobe Bridge as it doesn't work with the 5.2 release. One thing I do like that Lightroom 5.2 adds is being able to import my RAW files. Since I started using Lightroom 5.2 my images are crisper, and my color is vibrant. Since I am doing more and more web work, this has been a boon for me. I have found that for web, a 24 bit color space is the optimum setting, which I match by choosing Photo > Convert to sRGB – 24 Bit.

Adobe has announced that in July 2020, Photoshop's native GPU rendering capabilities will be deprecated, and that this transition to the native API will result in the removal of many legacy Photoshop features, not all of which are supported on CS4-2023 or macOS 10.15 Catalina. The transition to native GPU rendering is the result of a technology refresh and a modernization of Photoshop's architecture. Future updates will leverage this native feature set. Programmers and developers can use the native APIs to build their own plugins to extend Photoshop's native features from the ground up. While these plugins cannot augment workflow and pixel-level functionality, they will open up Photoshop to more emerging applications and platforms in the future. We'll shut off Photoshop's legacy APIs on July 31, 2020, so that all of Adobe's future products can consistently work with CS4-xx. This will happen slowly and can take a few Windows versions before Photoshop and other applications will stop working in unexpected ways. We want to do right by CS5 users. CS4 users will get an exceptional replacement that will allow them to start editing and output at the highest quality possible. CS6 will be available on July 31, 2020. All CS4 users will be able to purchase a one-time, standalone license for macOS or Windows with the newest version of Photoshop, or an annual subscription with the newest version of Adobe Illustrator or Adobe Photoshop, for a discounted price. We also have plans to offer standalone individual license options for the annual subscriptions in the future.
