These separate layers are grouped into one Photoshop file, which is known as a layer group. A layer group contains a number of layers, which are combined together to create a single unit known as a composite layer, which is used to create the final image. This composite layer can be moved around the canvas and resized as needed. In turn, the composite layer can be flattened into one single layer. A flattened layer contains all the layers of the layer group, and is the lowest layer in the file. Any changes that are made to one layer in the flattened layer affect all the other layers in the layer group. 933d7f57e6
