"The fastest growing area of our business today is the use of Photoshop in the cloud and across physical devices, and adding real-time collaboration between Photoshop and the web through Share for Review is going to accelerate that trend even further. Photoshop CC keeps users focused on the

final result, but in an increasingly connected world, users are sharing their work with others, looking for collaborative ways to work, asking questions and seeking help. Share for Review enables them to easily meet those demands, both online and on-site, while making images more powerful by taking advantage of the cloud's capabilities to provide new ways for professionals to edit and view images," said Steve May, vice president of Adobe Creative Services. "Adobe added a tremendous number of features to the desktop application in the latest release of Photoshop. Photoshop CC is made easier to use with consistency and ease-of-use improvements along with streamlined interfaces making natural interactions in tools and the cloud more natural. But this is just the tip of the iceberg of the new Photoshop CC, Adobe will continue to evolve the feature set based on feedback we receive from the recorded sessions and from all the early adopters," May added.

A new "Dynamic Object Profile" will allow users to save a default state of an object in connection with other objects and layer styles, helping users accomplish common tasks and reduce the trial and error. Layer Mask improvements include the ability to grey an object's corresponding area so that the effect is only applied to the featured object. Another feature is the ability to modify the mask with the new Paint Bucket tool, also called the Edit Bucket tool and the Bucket Adjustment tool.
