Do you have a professional tip that you want to share? Adobe's community is a great resource for all photogs and designers and we are thrilled to share some of the best ways to improve your skills. Tell us your tips in the comments below. One of the most impressive advances in this release is how much more consistent the performance and user interface has become. For me, this is largely thanks to the new pre-release work that Adobe has put into the Editor's Default Presets. In this release, the Editor's Default Presets are as streamlined as we've seen them. Some of the older presets were simply too out of date to be included, since they were based on the now abandoned CS6 format. New preset UI flawlessly brings it up to speed with CC and how it's used. The other major improvement has been with Photoshop CC's tabbed windows. This implementation is fantastic, in my opinion, and is much more sophisticated than the previous tabbed windows in Photoshop CS6. However, I still have two gripes with it. There's no ability to order the tabs from left to right, which forces you to rearrange them (and order them) and move them around according to what you're actually working on. And two, when you exit a tab, it remains visible – which takes screen space and can be distracting, especially if you aren't always working on the tab. However, these are things that I rarely if ever do, so I suppose it's a minor annoyance. Another area that has been dramatically improved in this release is in the area of image management. These include tools that enable you to crop images, apply true color profiles and create embedded license numbers. Unfortunately, the new embedded license tool does not yet work in print. Although this is a very minor complaint, I think it's something that Adobe needs to address, primarily because if I get sued, I want to be protected. Otherwise, you end up left with a lot of cropping to do to hide incompatible images.
