Adobe isn't the only company developing AI neural networks for image editing. In September, Google unveiled its Viewer , which automates tasks such as colorization, photo translation, and geometric manipulations. This free app uses Google's TensorFlow deep learning framework, and runs on mobile devices like the iPhone, iPad and Android. The new Google Pixel Slate may be the first Windows 10 device capable of running the —AI (artificial intelligence)—Photoshop CC app, and its only competitor in this space appears to be the Surface Laptop 2 running Windows 10 S, which can run the new Photoshop app, although the Surface Laptop 2 is a —PC—only device. This slideshow will use all available RAM and it was using all 1.4 GB of RAM on my 4 GB machine. It tries to open all images found in the editor, even small ones, and when that doesn't change anything, it opens all comparisons for editing. And if even some of these show nothing, it opens the first image to compare to, and so on. Loading the next image is really slow as it very often navigates through slow previews instead of opening the image in preview mode. Using Lightroom 5.5.4, I even had a 3 minute loading time for one image, i.e. it took 1 minute to open the image, 1 minute to read the preview and 1 minute to read and open image comparisons. That is slow, to say the least. The only reason I have done those tests is because I did not have time to compare the previous version. Keep in mind that you need to have that much space free on your hard drive, to make room for all those unneeded files. Trust me, it's really, really hard to find those big photo albums overflowing with your precious memories. Adobe rocks!

Of course, another downside to this transition to new native APIs is that it locks out legacy Photoshop features for Windows, Mac, and Linux PC and Mac users. However, if you live through this transition you will be left with many future updates and new features to enjoy. As always, the release date is not yet confirmed. A new and improved version of Photoshop is currently in its testing and beta stages. This is the usually the last time we see the complete Photoshop product transition from API 24 to the newly used native APIs. Also, it is the first major Photoshop release for the launch of Adobe Creative Cloud. Autodesk has similarly introduced its new pipeline tools for Revit, Building Information Modeling (BIM) and AutoCAD for the new native API, which shipped with AutoCAD 2020. With this new API, the team expected to deliver far more performance, better responsiveness, and much more functionality in the future. This formative year for new native APIs, may also signal the end of the day for GIMP, another free image editing software produced by the same team at Adobe. Currently, it is using libgdk 3, and is beta testing libpangocairo 1. Libre Graphics Commons, on the other hand, seems to be perfectly fine on the new

API and it will undergo a series of updates to keep it reliable. Other image editing software such as Pixelmator or Topaz, or other Adobe apps such as After Effects for video editing is also already able to run on the new native APIs.

One of the big advantages of Adobe Photoshop is the large selection of special effects it offers. You can adjust, create, and modify visual effects on images and shapes, in both the Photoshop and Photoshop Elements versions. It's a great way to add impact to images, add 3D-like effects, create a seamless background, and much more. The filter panel comprises a whopping 67 tools, which are deliberately divided into categories. For example, the first five are Filters, the next five are Adjustments, then Filters again and so on. They can be grouped into sub-categories, which are color and luminance/color balance tools, filters for textures, and effects. Photoshop has a larger tool palette than Elements. Lightroom is a standalone application in the Creative Cloud package, which is a subscription based product. It works with most of the same graphic assets as Photoshop and Photoshop Elements, although it is a standalone product, it no longer offers the ability to create PSD files. However, you can now open Lightroom files in Photoshop. After downloading and installing Photoshop, you should be given the option to activate the Creative Cloud service. This would take effect when you activate a Creative Cloud desktop app from the app store (or if you sign up at this website. A Creative Cloud page (Opens in a new window) explains what comes with the service, including access to frame, colors and grade your images, create virtual copies of images and much more. If you don't choose to activate the service, you will still be able to use Photoshop, but there will be no access to the Creative Cloud tools. Photoshop is available to download as a standalone product, but that is not the case if you want to sign up for the service.

Another incredibly powerful feature Adobe Photoshop has introduced in its new program is "Smart Guides." These are essentially a virtual on-screen guide to help you paint the image you want as precisely as you want to. With Smart Guides, you can create precise guides for your image. These guides will disappear if you move the image within the canvas, but will reappear if you move the image by dragging the image outside of the canvas. With the new guides, you can create those precise lines you need to create precise images without the need to actually create the precise lines - something previous versions of Photoshop had great difficulty attuning to. It has been an uneven year for Barack Obama. Opinions are still mixed on whether he has been a good president so far, but there is no question that he is the most talked-about American politician of the year. Announcing the policy on Tuesday, the Independent Review Group suggested that the UK should not automatically give someone a high security risk verdict just for having travelled to Pakistan. "The common factor we found between those who had travelled from Pakistan was their circumstances, and particularly their mental health problems, whilst overseas," the three investigators, who spoke with hundreds of people detailed in the report, said. "It's not just that they

are detained but it's how they are treated in detention that matters," he said. "The detention centres are not places of reform, but places of punishment and dehumanisation, with the power to abuse and humiliate detainees." The Independent Review Group's recommendations include:

- Government-appointed commissioners should interrogate British citizens and dual UK-US citizens for their potential "non-cooperation" with the US. These interrogations should take place in a non-judicial setting, the group said.
- The Home Office should not automatically extradite people on the grounds that they can face torture overseas, the report added.
- A review should be conducted of the way British citizens are arrested and interrogated under anti-terrorism laws, the report said.
- People who had been detained but not charged should be given access to legal advice and information as to their rights, the report said.
- Victims of torture, abuse and human rights violations should be compensated by the state, the report added.

Ahmed Ali Abassi, a British widow with Iraqi citizenship, is detained in London. Photo: AP Plans to bring back British-born terror suspect Ahmed Ali Abassi were called off on Tuesday. Whitehall officials were said to be torn between an 'overzealous' desire to bring the legal proceedings to an early conclusion and a wish to keep Abassi's detention secret at all costs. Mr Abassi was detained along with a Belfast man - understood to be Seamas Connolly, who worked as a salesman for RAF Boulmer - and a 20-year-old from London, Vincent Cassidy, after seven Sri Lankan seamen were stabbed at a unit in Cyprus in December. Abassi has reportedly confessed to his role in the ship incident, as well as to a series of attacks on the Israeli embassy in London and the Jewish centre in Nottingham. The Sri Lankan sailors were injured with meat cleavers at Colombo's Colombo Port and the Israeli embassy in London was once again attacked this week. A British national died on Sunday after being in in clashes in Baghdad between Iraqi security forces and Sunni militants. Last week, US authorities claimed that Abassi, 27, was planning to return to the UK to join Al Qaeda in its battle against the West. The Independent Review Group (IRG) said the outcome of the Abu Ghraib case should give the Home Secretary, Sir Charles Clarke, no option but to release him.
