Adobe Photoshop makes erasing portions of an image a piece of cake. To use this tool you simply need to click on a color (or part of a color) in the image and then either grab the eraser tool from a lower tab or use an eraser brush to erase the color. Once you choose that color for erasing, Photoshop will grab that color and then use it to erase parts of the image. To get more information on this tool, simply visit

While there are many different levels of Adjustment Layers that you can create, the most common ones are levels, contrast, hue, saturation, exposure, and temperature. Once you've created the Adjustment Layer you can adjust the levels as necessary to achieve a desired result. This is a large and helpful tool that is used to create giant images. Sometimes these can be a lot of fun to play around with, but there are tons of different settings, like alignment that can be very confusing for beginners. e3d0a04c9c
