Whether the answer to this question lies in professional use for Adobe CC members or for non-Adobe users, **Windows users will be left out in the cold** without a release announcement from Adobe. Moreover, this will likely not bode well for the non-CC user if they find themselves facing the same issues on the Mac platform. The Linux-based Lightroom goes a long way in supporting cross-platform photography software, but while having an integrated workflow management system (like the Mac-based Lightroom) is preferred, most photo editors feel it's better to have separate workflows for each platform. This is just one of the reasons why Adobe Photoshop is still the dominant photo-editing application today. The Apple App Store, which doesn't allow third-party stores to sell apps, had no apps that allowed you to do what Lightroom is capable of doing. And while the Microsoft workstation app applications (like Windows Photo Viewer) have been great, most people find that editing photos tends to be a one-off operation, and in a lot of cases, a heavily digital one. That was years before the availability of the iPad. While Photoshop and Lightroom were always limited to the Mac platform, there is a strong argument that designers and pro photographers who need or prefer Adobe's powerful tools will continue to support Mac-based products. The availability of Photoshop for iOS 12 last week hints that Adobe is also thinking of adopting this approach. **The ability to use basic tools developed by Adobe in the browser is in itself a P3 feature.** e3d0a04c9c
