The Photoshop Brush is used for on-screen painting, retouching, and photo-editing. The brushes are soft and yielding like a natural human brush that makes sense to draw on a photo. The brush head adjusts like a pencil and eraser to change its size, shape, and angle. You can choose the color of the brush and you can also change its density. The user can boost the process of stroke detection to speed up the painting process. Make sure that your images are saved for the web in the optimal format, quick web optimized format, or as JPEGs. These three charges are the best for web. If you are working in the margins of a wedding invitation, the JPEG format is fit for the use in any web device. The web optimized format is also capable of saving sizes for print. The layers are the most important thing in Photoshop. The Layers tool is mainly used to pick an image part and add it as a layer. The Transformation tool helps to change the position of the image object. It prevents unwanted photos manipulation or retouching by the user. It can be adjusted by using the directional

keys on the keyboard or by dragging a window to the default position. When a person colorizes an image using the “Random Colors” feature, it adjusts the color of the picture; the intensity of the color is automatically adjusted as per the user’s settings. Depending on the user’s demand and the available colors in an image, this process helps in easy adjustments, easy control, and distinction without any other tool.
