In addition to all of the other tools mentioned above, this professional-grade photo management and editing software gives you many powerful features. For photographers and graphic artists, workflow enhancements and performance improvements make it even better. I don't understand why Adobe continues to bundle two programs with their core professional software in such a poor attempt to increase computer sales. Photoshop Elements and Adobe Premiere Elements are not complementary programs. They compete against each other. People who simply want to use Elements to view photos on their PC, don't need Premiere Elements. So, why not stop selling it and just make Lightroom a premium version of Photoshop? It's not rocket science. Consumers want one program, and that is Lightroom. It's easy to use and is the image-viewing program on your computer, while Premiere Elements is the video editing program. They just go hand-in-hand. It would have been smarter to separate the two programs, maybe add AVID Pro Express to it, and have a $200 - $300 bundle. It's the most sensible package for entry-level users. Adobe should have taken this option in 2004, when it launched Elements, but instead, it made a colossal mistake by bundling it with Adobe Photoshop. The company is always trying to improve its image-editing software. In November 2014, it introduced Photoshop Elements 14 with 32-bit color, which gave it a slight advantage over competing software. In April of this year, it introduced the completely re-designed and upgraded version of Photoshop Elements. It is a welcome addition. We have used it extensively as a photo-viewing, organizing, and editing utility for almost two years. And, the new version, Photoshop

Elements 21, has integrated a JPEG loss-less compression engine, thereby increasing the speed of all editing tasks. While most people will probably be happy with the increased speed, I don't think it will matter much in the long run. The biggest impact will be a real-time preview when you are working with large-sized images. In many cases, I think real-time previews will make tools easier to use. However, in the case of managing large-sized images with Photoshop Elements, it will only slightly facilitate tasks. In my opinion, for this capability, Adobe should have launched it earlier. I mean, it is already integrated in the latest version of Lightroom and it already has a "real time" capability. But, you already know what I mean…. Please excuse my sarcasm.
