I have mentioned Lightroom before. It's Living Social's Best of the Year choice, and it's probably the most popular photo app most of us have on our phones. It's often described as a digital darkroom, but recent versions have allowed you to process your photos with a greater degree of precision. There are times when Instagram, yet another great app for capturing and sharing photos, simply isn't good enough. I can edit and process images in Photoshop Elements, but I find Lightroom faster, with more options, and better overall. At the end of the day, I get better results and I don't have to take out my wallet. Some of the best and most innovative digital photo editors are available across different platforms as apps. The best and most popular of those is probably Snapseed. The app lets you edit images in the same way as Photoshop, but in the form of easy-to-control nudges. If you have downloaded iOS apps such as Pixelmator or Photoshop Sketch, they can be converted into Mac apps, and so can any other good apps for iOS. All you need to do is double-click the app file to install it. The Mac app syncs to iCloud, and it works great on the iPad Pro Tablet only. At the time of writing, it's only available for Macs running macOS 10.13 or earlier. Sketch is one of the most popular photo apps on Android. It's so popular in fact, there are other apps like it, thanks to Google's relationship with the same company that created Sketch. The apps let you create and edit images in the same way. If you have Android, you can download the apps on a rooted phone, and they will let you edit images just like you can with Android Lollipop and later. The app is compatible with Photoshop. There's another app too called Procreate. It's a quick, easy-to-use photo editor app that is designed for iPads, iPhones and Android. It's compatible with Photoshop, but there is no way to sync your work with other edits you have made. The app is also far from a full replacement for Photoshop. The initial app has more limitations than the free version, the in-app-purchase version (\$4) is much more powerful, and it also lets you upload your work to a cloud-based storage platform. It's *also* compatible with Lightroom.
