This is an amazing update, not only does it bring a ton of new features, it makes me think back to how far our industry has come since when Photoshop was a cross platform application. I was on the same track when I bought CS6 last year and thought I would never be able to find a tool that would exceed it in terms of efficiency. I haven't felt like that since CS3, and what a first year it was when I bought CS3! For the definition of 'friction', I do not think we will be seeing anything like what I have just been using, and it remains to be seen how and if Apple's A9 processor can do the job. I will go off with a final question - what is this new press release? whatever it is, it's BLOATED. The first release from Adobe was a bit over 800 KB, this one is over 8 MB and it's actually from a year or two ago! I don't think there is any way a magazine the size of CreativeLive could download it and all of it would fit on a single page, so it must be a combination of multiple newspapers. Are they going to be rolling this out to people as a 'free upgrade', because I'd much prefer if the people who pay for the resources can keep using it without having their subscription auto-renewed? My image editing software has become a staple in my life, and I'm not about to use an application that saves me time but requires me to pay \$24.99/month - that seems to be their medium for us, and cannot they try to find a way to make us happy? Did we forget there is an entire industry for us, an alternative called Apple?

Regards! Sren

Users who have purchased Photoshop Creative Cloud can get up to 60 percent off when they upgrade to the new Elements 2023 package, which includes upgrades to the application, the release of Elements 2023, and the Elements subscription. The company also released 19 new features using the AI technology that enables the company to accomplish

certain tasks automatically. Often, the AI-powered features work in ways that make them seem magical, like having an artist create a painting based on your photo, automatically. No longer is that perplexing concept required to have trained computers do things for you. These AI capabilities are designed to create a more pleasant experience, improving the user experience and performance of the software. After the release of the updated Elements and Photoshop, the company also released a new version of its video editing software, Premiere Pro CC. This software is an advanced version of the desktop editing program. It includes native support for HDR video, real-time 3D editing, support for many popular media formats, and a range of additional editing tools. Last year, the company launched a smart speaker called the Pixel, due to the relationship between the company and Google. It will be operated using the Google Assistant. Soon, it will add to its already impressive stock of voice commands to take calls on handsets, tablets, and computers. Another recent addition to the company's platforms for creators includes Adobe Animate CC. The tool lets users animate simple 2D drawings and 3D models with complex, interactive timelines, without a degree in art or design.

When it comes to photography, Adobe's Photoshop Elements was one of the company's most important products and one of Apple's best standbys. The app, which was originally created with a desktop OS in mind, was originally published for macOS in 2012. It was followed up by Photoshop Elements 9 in 2015 and Photoshop Elements 10 in 2018. Based on MacLife's review of Photoshop Elements 10, which runs on macOS 10.14 or later, here's what you'll get if you want to experiment with your photos.
