Because Photoshop can be installed on multiple systems, you may want to install it on multiple systems at the same time. You can do this by using the Cross-Drive Installation feature. To use this feature, you must first create a backup folder for all your images. Then, install Photoshop on one system. Next, go to Adobe's website and install the Cross-Drive feature. After the feature is installed, return to the Photoshop installer that you used in step one and open the folder that you created in step one. Now, Adobe will upload all your images to this folder on the system you are installing Photoshop on. When the Photoshop installation is complete, simply go back to the first system and open the folder. Now, you should have all of your images in one folder. To read more about how to use Cross-Drive installation to install Photoshop, visit the Adobe website.

Star Wars fans may feel like they're drifting into the sunset toward Episode IX; but, for many of us, Photoshop CC offers a reassuring promise: we may come back to the Big Sky for one last look. If you're signed up for Lightroom, you can use the 3D feature to create 3D Auto-Fix frames, which either automatically stay in place or are adjustable in 3-D space. The first two stages in the process are similar to the first two steps you see when you create a 3D layer in the Layers panel, but the last step has some interesting options: you can adjust the layer's depth and proportionately warp the image using an adjustment layer, and the adjustment layer can be removed after a while. Adjustment layers remain in place, so you can re-adjust them later; you can also save them if you need to go back in and adjust them later. Adobe's newer local facial recognition technology, which is sometimes called Adobe face ID, will show your face as a drop-down suggestion for people in the frame in pre-crop and many other locations; if you get too many people in the frame, the facial recognition feature will stop suggesting faces. So it's handy to have face recognition turned off if you're working on a low-resolution file.
